

PEAK

COMPLETIONS

Introducing the third generation...

EXPANDABLE FRAC SLEEVE

providing multiple hydraulic
fracs per open-hole stage

World Leader in
Horizontal Completion Technology

EXPANDABLE FRAC SLEEVE GEN III

Peak introduces the new, third generation **Expandable Frac Sleeve**, increasing production by providing multiple exit points between packers, expanding the fracture and profile.

A single ball travels down to the tool system, activating multiple sleeves across each stage. This can simulate multiple perf clusters, eliminating the need for pump-down plugs and expensive wireline and coil tubing operations — a truly rigless alternative.

- Allows multiple frac valves to be opened with a single ball, providing multiple fluid exits per stage
- Increases the opportunity for multiple fracs per stage
- Improves stimulation coverage across the stage
- Eliminates risky pump-down wireline and perforating procedures
- Results in quicker completion times and reduced costs
- Flexible applications for limited-entry fracturing
- Access full ID of casing after clean out

Peak Completion Technologies, established in 2003, specializes in custom completion systems which are wellbore specific. An industry leader in open-hole and multi-lateral completions, Peak offers a full range of **innovative completion equipment and techniques** for all oil and gas applications.

Peak Completions combines the latest technology with industry proven tools, custom design and good, old-fashioned customer service from a team of experts with over 350 years of oil field experience. Peak helps producers save time and money by implementing efficient completion designs in every phase from planning to installation.

Whether you have one well or a thousand, Peak offers personal, innovative service to supply you with anything you may need from our comprehensive list of products and services.

Our success is accomplished by:

- quality products and services;
- integrity of our efforts;
- desire to exceed our customers' expectations; and
- continual improvement of our processes, services and products.
